PEEREDUCATION

between Keravanjoki school and Kerava highschool

Goal OF THE EXPERIMENT

- ▶ -Increase co-operation between schools in Kerava especially between the classes that emphasize naturalscience.
- ▶ -Help students to transfer to a new school
- ▶ -Give tutorial help to younger students
- ▶ -Give the older students a chance to develop their tutorial skills

Plan

- ▶ -The older students from Kerava junior highschool give tutorial help to Keravanjoki school eight graders, who are mainly from a class that emphasizes natural sciences.
- ▶ - Kerava highschool also emphasizes natural sciences
- ▶ -The tutoring is voluntary and consists of one-on-one meetings
- ▶ -Duration six weeks: during the first meeting the tutor and the student make a plan and decide in which subjects (mainly in maths, chemistry physics and biology) help is mostly needed.

Evaluation

- ▶ -Student can get activity points and this way get better grades in natural sciences.
- ▶ -Tutor gets a part of course completed considering that a necessary report is done in which the student and the tutor reflect the whole peereducation process.
- ▶ -Co-operation between the teachers of both schools is also needed.

Challenges?

- ▶ **CURRENT EXPERIMENT:**

- ▶ Between May and August we lost at least ten voluntary students from Keravanjoki school and ended up in total of one pair.
- ▶ Both the student and the tutor have been sick during the autumn so only two meetings have been arranged.

- ▶ **IN GENERAL:**

- ▶ To get the students do extracurriculum activities voluntarily.
- ▶ The lack of motivation among those students who would need tutoring the most.
- ▶ The lack of time (a lot of hobbies) among those students whose motivation is in the right place.

IN THE FUTURE?

- ▶ The student and the tutor have agreed to have regularly meetings during the whole school year so this experiment continues.
- ▶ TO MAKE THE PEEREDUCATION PERMANENT:
- ▶ Start the planning earlier in the spring
- ▶ Expand the peereducation to other classes than those which emphasize natural sciences.
